NOTE: This funding is for all entities within the state, not just the State Forester’s office.

State, private, and other non-Federal forests make up 92 percent of the 176 million acres of forests across the 20 states of the Northeast and Midwest. The U.S. Forest Service and state forestry agencies collaborate with other partners on shared stewardship goals, which also support each State Forest Action Plan. The State and Private Forestry programs promote the health, resilience, and productivity of trees and forests across all ownerships for the benefit of people and wildlife; establish and manage urban and community forests; empower private landowners with information and technical assistance to sustainably manage their forests; and protect critically important rural forests and watersheds.

Program Goals

- Conserve and manage working forest landscapes for multiple values and uses.
- Protect forests from threats.
- Enhance public benefits from trees and forests.

Key Issues

- Lack of forest stewardship on much of the state’s forest land.
- Lack of public understanding about the importance of forests and forestry.
- Exotic and invasive species, both existing and potential, threaten the health and diversity of urban trees and woodlands.
- The financial viability and the future of the State Forest Nursery.
- Lack of local investment in urban forests is limiting needed maintenance.

Forest Facts and Accomplishments
Program Highlights

**Cooperative Fire Protection**

Iowa acquired $1,156,704 in property from the Department of Defense Fire Fighter Program and $531,367 in property from the Federal Excess Personal Property program. The property is used to support the state's and volunteer fire departments' wildland fire programs.

**Forest Health Protection**

Emerald ash borer has been confirmed in 69 counties and is causing significant ash mortality in portions of the state. Oaks in the state are under assault by several native and non-native damage agents, weather events, and chemicals; however, defoliation from gypsy moth has been prevented so far through Slow the Spread Program activities that reduce the advance of this pest. Multiple surveys of black walnut have not found thousand cankers disease.

**Forest Stewardship**

Iowa's Forest Stewardship Program connects family woodland owners with professional foresters to help them meet management goals on their property. The program also addresses critical issues including watershed protection, soil conservation, declining songbirds and pollinators, oak decline, and rural economic diversification through the $3 billion forest products industry. In preparing for modernization of the national program in Fiscal Year 2020, Iowa has focused on increasing implementation rates of forest stewardship plans, with a mean 85 percent success rate over the past four years and with 80 percent of forest stewardship plans developed in priority areas. The total number of Iowa citizens receiving technical assistance and education in Fiscal Year 2019 increased by 6 percent to over 8,600.

**Urban and Community Forestry**

In 2019, more than 4,600 residential landscape trees valued at about $300,000 were planted thanks to partnerships with energy companies. In addition to delivering urban forestry technical assistance and programs, the Department of Natural Resources has helped communities prepare for emerald ash borer and other pests through community tree inventories, canopy cover assessments, master plans, and urban forest management plans.
