| Selected Forests: |
| Land Between The Lakes NRA (FY 2017) |

* Stratum is the combination of the site type and use level or proxy code. Sample days were independently drawn within each stratum.

† DUDS = Day Use Developed Site, GFA = General Forest Area ("Undeveloped Areas"), OUDS = Overnight Use Developed Site, WILD = Designated Wilderness

‡ Use level was defined independently by each forest by defining the expected number of recreation visitors that would be last-exiting a site or area on a given day. The forest developed the range for very high, high, medium, and low and then assigned each day of the year to one of the use levels. If the site or area already had counts of use at a site or area (such as fee envelopes or ski lift tickets) the site was called a proxy site and sampled independent of nonproxy sites.

§ Exiting traffic count is the estimate of total daily exiting traffic units for that sample day . A traffic unit may be people and/or vehicles.

Complete interviews are those in which the individual contacted agreed to be interviewed, was recreating on the national forest and was exiting the site or area for the last time that day
